The Omni Flush Catheter

Often Imitated, Never Duplicated.

Omni Flush Tip Design

Directed Contrast Bolus[1]
Allows for improved opacification, less reflux into adjacent branch vessels and less overall contrast load to the patient. (Fig A)

Contralateral Tip Positioning[1]
Facilitates easier contralateral access. Once the bifurcation has been crossed and wire removed, the shape of the Omni Flush is such that the tip is pointing down into the vessel lumen. (Fig B)

Multifunctional
Single catheter for flush aortography, bilateral "run-offs" of the lower extremities, and facilitates contralateral iliac selection, saving time and money. (Fig B)

Additional Measurement Reference Tool
The distance from the top of the Omni Flush curve to the bottom of the tip is approximately 15mm.

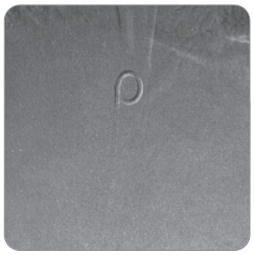

Soft, Radiopaque Tip
Highly visible tip that is soft to minimize trauma and damage to the patient's vasculature.

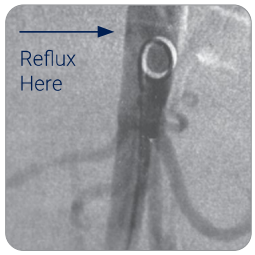

Self-Dilating Tip
Aids in easier insertion of the catheter over the guidewire, as the catheter dilates the tract during advancement.

Better Flush Use

(Figure A)

5F PIGTAIL
15ml at 15ml/sec—30%

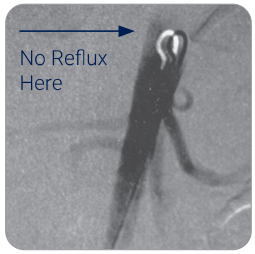

5F OMNI FLUSH

High flow stability

Better bolus concentration

Contralateral Selection

From a value perspective, the Omni Flush catheter allows you to go up and over the bifurcation for iliac access, saves you a catheter exchange and also the cost of that catheter. If you can hook the bifurcation and then pull down, that's increased utility and why some people use an Omni Flush over Pigtail.

Super Radiopaque Tungsten Tip
for easy visualization under fluoroscopy.

Soft, Atraumatic Tip
minimizes trauma and damage to the patient's vasculature.

Self-Dilating Tip
dilates the tract, allowing for an easy, smooth insertion.

Tapered Tip
allows for excellent track-ability over the guidewire.

Proprietary Tip-to-Shaft Weld Process
of radiopaque tip to co-extruded nylon shaft ensures catheter tip durability.

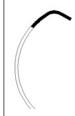

Co-Extruded Nylon Shaft
for dependable pushability and torquability.

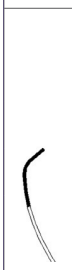

Duration Hydrophilic Coating Technology on Mariner Catheters
on distal 20cm does not require pre-wetting and allows for smooth navigation, as well as optimum handling and control.

Funneled Hub
facilitates guidewire insertion into the catheter.

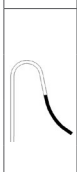

Robust Strain Relief
minimizes catheter buckling and kinking at the hub.
